DETAILED ACTION

Claim Rejections - 35 USC § 112

Claim 30 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 30, "solution colors" are claimed inferentially. There is not antecedent basis for the solution having a color or multiple colors.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2-5,8,10,16,17,22-26,28 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Liedtke US 5,686,112 in view of Hughes, Jr. et al (hereinafter "Hughes") US 6,139,873 and Examiner Official Notice.

Re claim 30, Liedtke discloses a disposable dispensing apparatus for storage and dispensing of a topically applied medicament comprising a blister pack having a

Page 3

plurality of wells, wherein the medicament is incorporated within a solution for topical administration and contains a biologically active substance. The wells are arranged and grouped into rows and columns. Additionally, the Examiner takes Official Notice that grouping of wells in medicants of this type are typically grouped to assist the user in the proper use of the medicants.

Leidtke does not explicitly disclose a transparent well, but the Examiner takes

Official Notice that transparent wells are the norm in disposable medicant dispensing
apparatus so as to allow users to view whether a medicant has been taken or not.

Leidtke further discloses indicia 4, which can be numeric or color, but does not explicitly disclose that the solution has multiple colors that can be seen through the wells.

Hughes in col. 14 lines 37-55 describes colors being added to hormone treatments that, like Leidtke, may be topical (line 54) for the purpose of color-coding (line 38).

Accordingly, it would have been obvious to one of ordinary skill in the art to modify the dispensing apparatus of Leidtke with the teaching of Hughes so as to provide a dispensing apparatus that simplifies the medicant taking regimen.

It further would have been obvious to modify an apparatus for color coded topically applied medicants with transparent wells so that the colors of the color coded medicants can be viewed so as to allow the color coding to provide the benefits inherent in color coding.

Re claim 2, the topical treatments of Leidtke and Hughes would meet this

Application/Control Number: 10/787,241

Art Unit: 3728

limitation.

Re claim 3, Leidtke discloses a plurality of rows.

Re claim 4, Leidtke shows the wells being grouped in rows and columns, the wells are inherently capable of being used sequentially as claimed.

Re claim 5, colored solutions as taught are inherently capable of being used to indicate when the dose is to be taken as claimed.

Re claim 8, colored solutions as taught are inherently capable of being used to indicate elements, the stage, etc as claimed.

Re claim 10, this claim is intended use only. Additionally, the claim sets forth the well known varying of doses.

Re claim 16 and 17, these claims are set forth by Leidtke.

Re claim 22, see Leidtke.

Re claim 23, the uneven dose of one of four different varieties of concentration, etc. is well known in hormone replacement treatment.

Re claim 24, the intended use of one per day is well known in hormone replacement treatment.

Re claim 25, the intended use of tailoring the treatments is well known in hormone replacement treatment.

Re claim 26, 28 day treatment periods are well known in hormone replacement treatment.

Re claim 28, Leidtke and Hughes disclose hormones.

Application/Control Number: 10/787,241

Art Unit: 3728

Claims 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Liedtke in view of Hughes US 6,139,873 and McDaniel US 2002/0120225.

Liedtke does not disclose sequential colors being used in the solution.

Hughes discloses adding colors to hormonal treatments for color coding purposes and also discloses topical ointments in col. 14, lines 34-63. Hughes does not disclose sequential colors.

McDaniel discloses in Fig. 9 and page 6 the use of sequential colors within a multi step process for identification purposes.

It would have been obvious to modify the apparatus of Liedtke with the teachings of Hughes and McDaniel so as to provide a multi-day drug blister pack where the user can easily visually identify the correct daily dose via visual identification through the identification of a color within a color sequence.

Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over Liedtke in view of Schaefer DE 198 31 263 A1 (US 6,630,149 is the corresponding US Patent and serves as the English language translation).

Liedtke does not disclose non-aqueous solution medicaments.

Schaefer discloses the combination of aqueous solution medicaments and nonaqueous solution medicaments.

It would have been obvious to package both aqueous solution medicaments and non-aqueous solution medicaments in a single blister pack, as taught by Schaefer, so as to minimize the packaging required, and to minimize the potential that the different

Art Unit: 3728

medicaments would be separated.

Response to Arguments

Applicant's arguments have been addressed within the rejections stated above. Applicant's assertion that color, as set forth in Hughes, is being used as an indicia on the pack is categorically wrong. Note the FD&C dyes mentioned in col. 14. Color coding as set forth by Hughes is clearly in the medicant, not on the pack as Leidtke teaches.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
